SUBJECT: H & R Plant Shutdowns during Quarter Break

Construction of the H & R Plant expansion project has progressed to the point that shutdowns for piping and electrical connections to our existing system are necessary to provide additional heating and air-conditioning capacity for Classroom Buildings II and III. To keep inconvenience at a minimum, refrigeration unit shutdowns have been scheduled Monday, Wednesday and Friday, June 14, 16 and 18, during the break between Spring and Summer Quarters.

All core buildings will be affected. Air handling units will continue to operate, but the chilled water in the units will become warmer as it circulates throughout the day. Extra cooling will be provided in the periods immediately preceding the shutdown days, and the effect of the shutdowns, if noticeable at all, is expected to be negligible until late afternoons of the designated days.

Plant operations recommends the conservation of cool air by keeping draperies closed and reducing the use of lights as much as possible during the shutdown periods.
