

## Evaluation Process/Instruments

Two types of evaluations will take place. First, Escape Room participants will complete a short survey immediately after participating in the Escape Room to assess outcomes related to the Escape Room's learning objectives. Data gleaned from this survey can be utilized in improving the Escape Room experience moving forward. Secondly a Casey-Fink Graduate Nurse Experience Survey is sent to the newly licensed staff before participating in the Escape Room, initially, 6 months, and at 1 year. The Casey-Fink Graduate Nurse Experience Survey is a tool derived from a comprehensive literature review that measures new graduate nurses' experiences on entry to the workplace. Metrics in this tool include demographic information, skills/procedure performance, comfort/confidence, and job satisfaction dimensions (Salem Alghamdi & Ghazi Baker, 2020). Data gleaned from this tool will provide insight into the efficacy of the Escape Room in improving confidence in newly licensed staff and easing their transition into practice.
